System Overview

The NVR-ELE8-PSV2 is an 8 channel mini NVR with 8 ports of PoE built right in, allowing you to eliminate extra cabling as you can power your cameras directly from the back of the unit. Connect up to 8 IP cameras, which can range in resolution from 1MP all the way up to 8MP or 4K. You can connect the NVR to a monitor using either an HDMI or VGA connection allowing you to complete your security camera setup. You can also utilize your unit for remote monitoring with your phone, tablet or computer as long as you have an internet connection.

Features

Perimeter Protection

These functions significantly improve accuracy. Perimeter Protection reduces false alarms and decreases pixel count requirements for object detection it also features custom tripwires based on object type for automation in limited access areas such as pedestrian or vehicle-only zones. This combination of advanced AI analytics and real-time alerts to a desktop or a mobile client reduces system requirements as well as resources, resulting in greater surveillance system efficiency.

Face Detection

Whether you wish to recognize, identify or verify a person, a camera with facial recognition software is an efficient solution. It can help you improve customer service and protect your assets by identifying important customers or potential perpetrators.

SMD Plus

SMD Plus, (Smart Motion Detection Plus), is an upgraded version of SMD that greatly improves the alarm accuracy by loading deep-learning algorithm that helps analyzes person and vehicle shapes based on motion.

People Counting

This feature counts the number of people that go in a specified region and the number of people that come out. This is perfect for businesses, banks and anybody who wants to monitor the amount of people coming and going.

SMART H.265+

Smart H.265+ technology is a collection of intelligent encoding algorithms based on H.265. Smart H.265+ codec can effectively enhance video encoding efficiency according to the characteristics of different surveillance environments, it can also greatly reduce transmission bit rate, storage capacity to improve the overall system.
