

TP-LP700

700TVL License Plate Capture Camera

There are specialized features that will be needed when you plan to capture license plates. Those features can be found right here. This License Plate capture security camera features a Sony 1/3" CCD / EFFIO P with a 6-22mm Lens and our top of the line DSP that provides an astounding 700 TV lines of resolution.

- On Screen Display
- Headlight Compensation
- Digital Noise Reduction

You can use the OSD to take advantage of many features that will make your license plate capture project a success. Use the shielded privacy regions to block out unwanted headlights and brake lights, the eclipse feature will suppress any color spectrum you designate including the red tail lights that often blind security cameras when trying to capture license plates. The White Light LEDs can cover a distance up to 165ft . There are many additional features like built in motion detection, 3D Digital Noise Reduction to improve night time low light clarity, digital stabilizer for windy environments and even a built in 8x digital zoom. Ideally, you will use this security camera to only capture the license plates. It should be zoomed in tight to the designated area, then use another more basic security camera for the overview which will provide you more details about the vehicle.

TV Lines:	700TVL
